

SQL Overview

SQL by Examples

TRAINING
CENTER

SQL (Structured Query Language) – *a domain-specific language used in programming and designed for managing data held in a relational database management system (RDBMS).*

Triggers

Stored
functions

Stored
procedures

And so on...

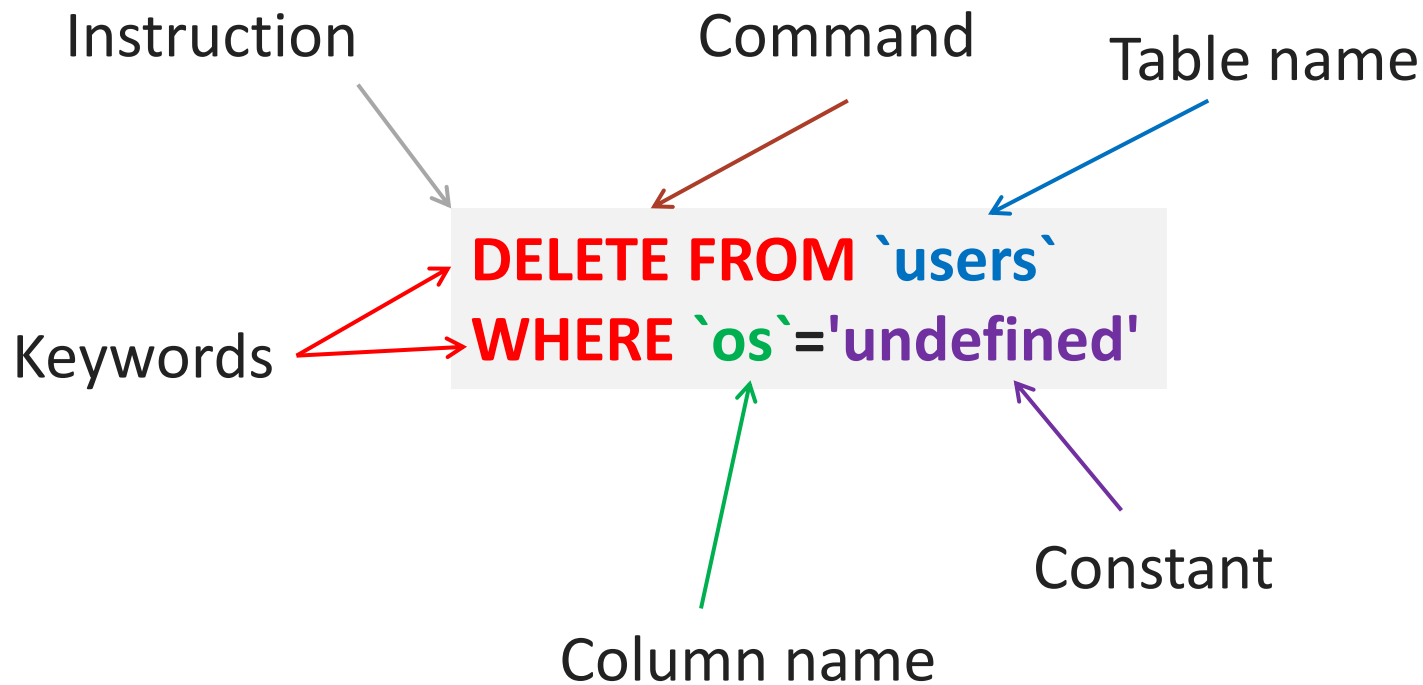

SQL (along with such dialects as T-SQL, PL/SQL, etc.) is the main universal tool to interact with a DBMS and to perform a huge variety of operations.

DML

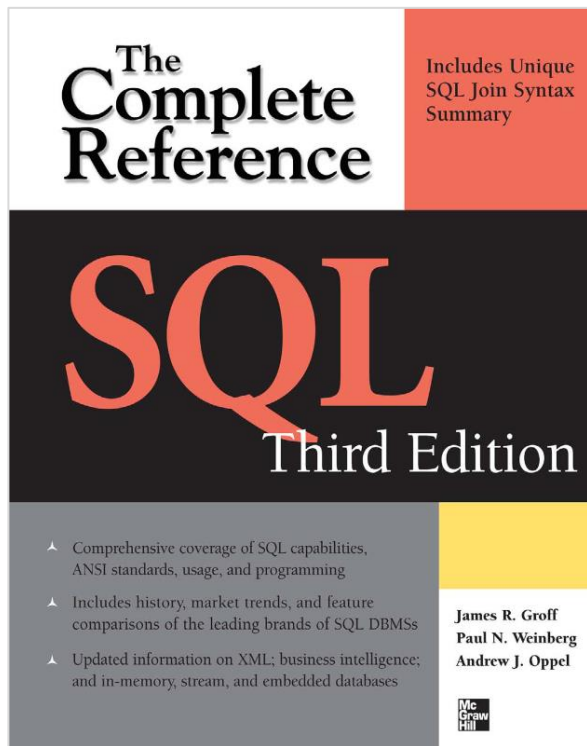

DDL

DCL

TCL

And that's all about SQL 😊 (yes, this is a practical training)

See also official documentation for you DBMS.

Start with this course if you are not familiar with relational databases at all.
